SOFTWARE

Tree Canopy Goals and Analysis

CITYgreen is a Geographic Information System (GIS) add-on software produced by American Forests. This software requires that tree canopy has already been mapped in order to plug the information into the model, which can be used to determine the costs and benefits of urban trees for stormwater, carbon and pollution sequestration and other values.
<http://www.americanforests.org/resources/urbanforests/treedeficit.php>

i-Tree is a state-of-the-art, peer-reviewed public domain software from the USDA Forest Service that provides urban forestry analysis and benefit assessment tools. The i-Tree Tools help communities strengthen their urban forest management and advocacy efforts by quantifying the structure of community trees and the environmental services that trees provide. <http://www.itreetools.org/>
